DECLARATION

WE hearby declare that the project work reported entitled [Freelancer Marketplace and Project Management Tool](#) in partial fulfilment of the requirement for the award of Degree for Bachelors of Technology in CSE at Lovely Professional University, Phagwara, Punjab is an authentic work carried out under supervision of my supervisor [Miss Jaspreet Kaur](#). The content of this project represents authentic and honest effort conducted, in its entirety, by our team members. We are fully responsible for the contents of our project work.

Introduction

Freelance project management involves managing projects for clients of your choosing, on your own. In this scenario, you're not working for an established company or agency—you're working for yourself. Finding that perfect information about Freelancer Marketplace and Project Management Tool. That's why we created an informative website to full fill all the requirements of the user.

Concept Used

In the making of this project, we have used the concepts that have been taught to us in class and we have used those conceptual learnings to improvise it.

The concepts used are:

- HTML 5
- CSS
- External CSS
- Internal CSS
- Javascript

HTML

HTML

- ❑ HTML is a markup language used for structuring and presenting content on the World Wide Web. It is the fifth and final major HTML version that is a World Wide Web Consortium (W3C) recommendation. The current specification is known as the HTML Living Standard. It is maintained by the Web Hypertext Application Technology Working Group (WHATWG), a consortium of the major browser vendors (Apple, Google, Mozilla, and Microsoft).

CSS

Cascading Style Sheets

Cascading Style Sheets

- ❑ Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML, or XHTML). CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of content and presentation, including layout, colours, and fonts. This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file, which reduces complexity and repetition in the structural content.

External CSS

An external stylesheet is a standalone .css file linked from a web page. Using external stylesheets, you can apply rules to multiple web pages. If you ever need to make widespread changes to your website design, a single change in the stylesheet can be applied to all linked pages, saving lots of time and effort.

Internal CSS

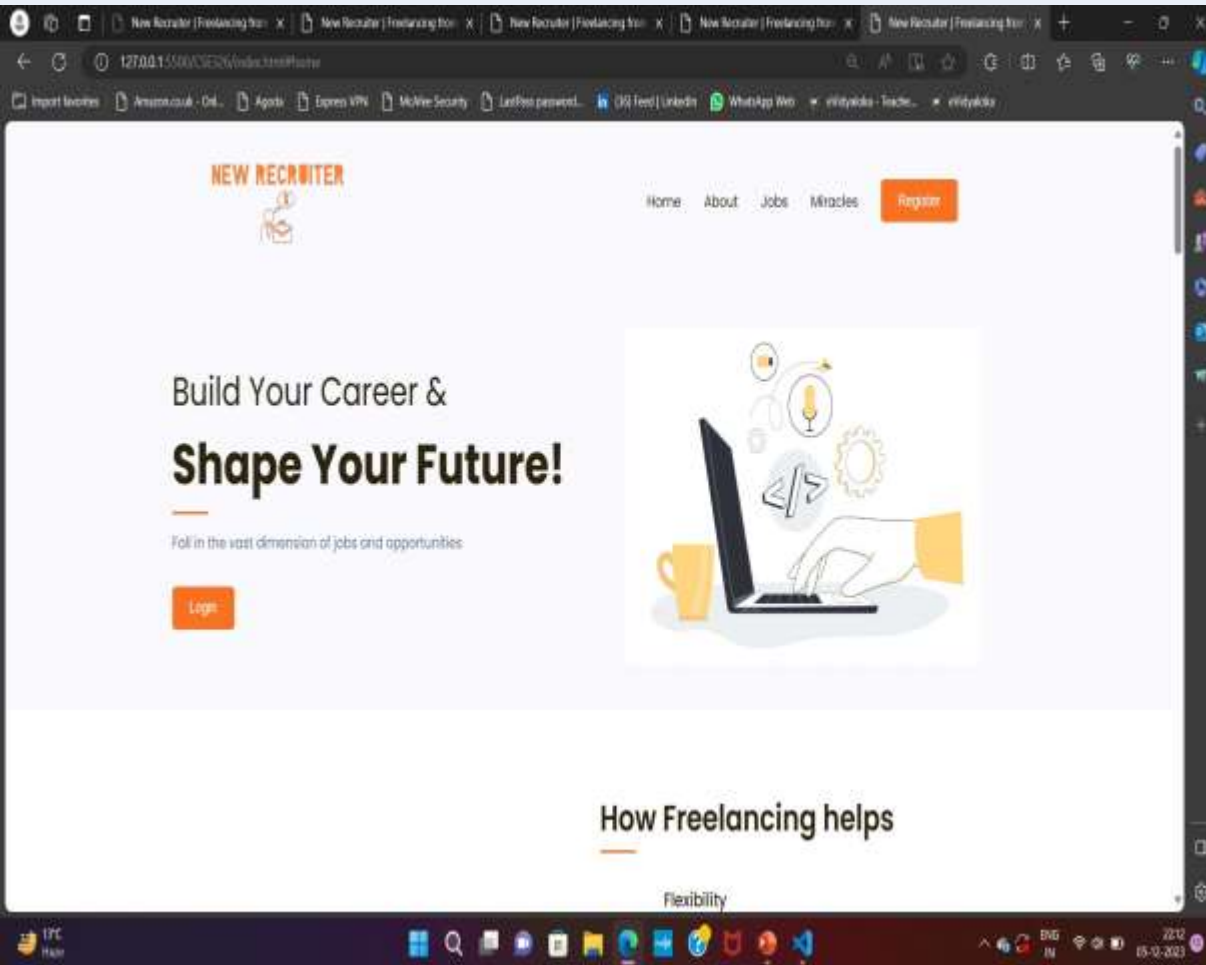

An internal stylesheet holds CSS rules for the page in the head section of the HTML file. The rules only apply to that page, but you can configure CSS classes and IDs to style multiple elements in the page code. Again, a single change to the CSS rule will apply to all tagged page elements.

Javascript

Javascript is a versatile programming language used for web development. It allows for dynamic, interactive websites by enabling client -side scripting.
